

SecureNet IP-VPN

Take control and safeguard your business communications

Private and efficient communications with your extensive business network is critical to your operations and competitiveness. Utilising a highly advanced MPLS (Multi-Protocol Label Switching) technology-based network system, SecureNet IP-VPN service creates totally secure private tunnels to connect your branches between Hong Kong and other major cities in Asia Pacific. HKNet offers flexible, scalable and cost-effective MPLS-based network solutions and provides access options ranging from DSL to Metro Ethernet.

Overview

High Security Levels

The advanced MPLS technology ensures a high level of security, through isolating each VPN from other networks.

Carrier Neutral

HKNet's multiple carriers local loop connections enable maximum local geographic coverage, high diversity options and high availability failover solutions.

High Flexibility

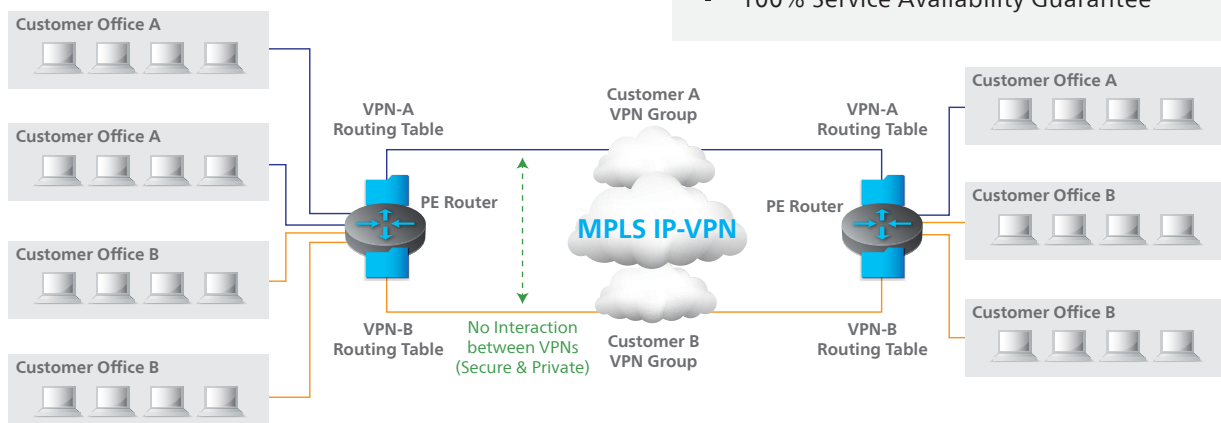

Flexibility of adding/ deleting sites within the network or increasing the bandwidth of existing network, and capability of data, voice and video transmission.

Extensive Coverage in Asia Pacific

Riding on the solid foundations and strategic partnership of NTT Communications, HKNet offers extensive coverage for IP-VPN service in China, Hong Kong, Ho Chi Minh City, Kuala Lumpur, Singapore, Sydney, Taipei and Tokyo.
